

Radio Equipment Directive 3.3

From 1 August 2025, the EU Radio Equipment Directive (RED) enforces new cybersecurity requirements for radio-enabled devices. Manufacturers of products with Wi-Fi, 4G/5G, Bluetooth or similar interfaces must meet RED cybersecurity standards if they want to sell in the EU. Bureau Veritas Cybersecurity supports your complete compliance journey.

Our RED Cybersecurity Services give you:

Clear understanding

We explain the whole compliance journey, including the reasoning behind RED requirements.

Streamlined process

We provide expert guidance and support throughout the process, saving you time and effort.

One stop shop

We help you starting from an initial training, all the way to the formal assessment and RED certification.

Why choose our RED Cybersecurity Services?

RED compliance is essential for manufacturers of radio equipment because it ensures products meet the European Union's strict requirements for safety, electromagnetic compatibility, and, **crucially from August 2025**, cybersecurity and data protection. Achieving compliance not only enables continued access to the EU market but also protects manufacturers from significant financial, legal, and reputational risks associated with non-conformity, such as recalls or market bans.

Bureau Veritas Cybersecurity offers a **comprehensive suite of services** to help manufacturers, importers, and sellers achieve RED 3.3 compliance. The support covers every stage of the compliance journey, including tailored workshops to clarify regulatory requirements, product design reviews to ensure alignment with cybersecurity standards, risk analysis and gap assessments, necessary product testing, and certification services to obtain the EU Type Examination Certificate.

RED Cybersecurity Services we offer:

RED Training

It is essential for you to understand the requirements of RED article 3.3 and their potential impact on your product and process. We offer remote or on-site workshops to cover these requirements, tailored to your company and product.

RED Evaluation and Certification

We provide the whole set of activities including risk assessments, documentation review, product testing, and the final formal type certificate.

RED Consultancy

We give you expert guidance on compliance and can help you with understanding the gaps in your product or documentation. Our experts will make sure to have you covered along the whole journey.

Why choose Bureau Veritas

Bureau Veritas Cybersecurity is your expert partner in cybersecurity. We help organizations identify risks, strengthen defenses and comply with cybersecurity standards and regulations. Our services cover people, processes and technology, ranging from awareness training and social engineering to security advice, compliance and penetration testing.

We operate across IT, OT and IoT environments, supporting both digital systems and connected products. With over 300 cybersecurity professionals worldwide, we combine deep technical expertise with a global presence. Bureau Veritas Cybersecurity is part of the Bureau Veritas Group, a global leader in testing, inspection and certification.

Example case | RED 3.3

What problem did the client have?

The manufacturer of a connected product needed to demonstrate RED compliance before 1 August 2025, dealing with a short timeline and limited resources/knowledge of the evaluation and certification process.

Result

Our team started with an initial workshop increasing process efficiency. Following that, we used our structured and predictable evaluation process, making sure the process led by our RED experts was smooth. The project was successfully finalized in time, and the customer met the critical deadline for its product.
